Keravis WhiteStone

The new and unique authentically non-stick clear coating

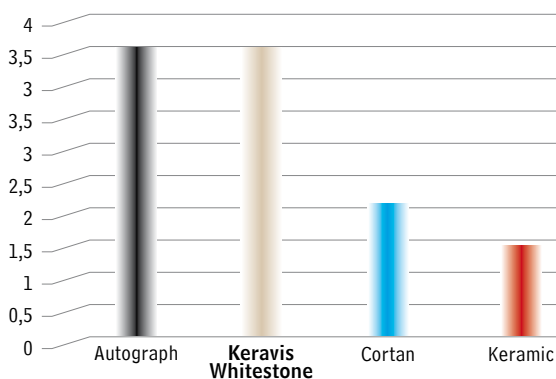

Ballarini, leading producer of non-stick cooking equipment, is the only company that can offer a complete range of coatings, designed and applied in a special way for the catering sector (intensive professional use) and domestic use (frequent and intensive use).

KERAVIS WHITESTONE is the only metal cutlery-proof non-stick clear coating.

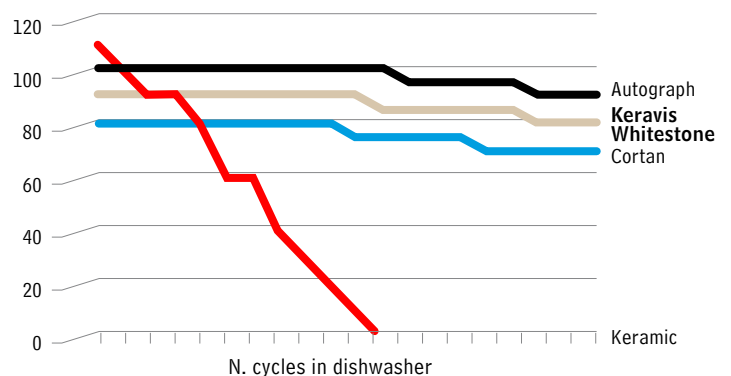

Keravis WhiteStone, the first and only non-stick coating reinforced with ceramic mineral particles that guarantees 100% non-stick performance and high scratch resistance. Ideal for prolonged use and intensive washing in dishwashers.

ABRASION RESISTANCE ACCORDING TO LGA TESTS

NON-STICK DURATION

Why choose Salento with Keravis Whitestone

The Salento line is the Ballarini collection that best expresses the relationship between the top quality materials used and the applied coating technology, with the sale price.

Keravis WhiteStone is undoubtedly the coating that best exalts the relationship between non-stick, scratch-resistance and 100% resistance in the dishwasher. This coating is the most technologically advanced available on the clear, non-stick coating market. Unique, strong and resistant. Above all, it is truly a non-stick product.

All Ballarini coatings are certified and approved by the control institutes that regulate the laws pertaining to food protection, comfortably meeting all standards requested by the regulations in force all over the world.

The best sellers in the Salento range are now available with KERAIVIS Whitestone non-stick coating, a coating that offers the same technical features and durability associated with the Salento line, but in line with today's market trends which favour clear coatings.

The Ballarini world of non-stick coatings

All applied non-stick coatings are tested in the Ballarini quality laboratories and used in full compliance with the international quality standards and regulations that regulate the qualities of materials that come into contact with foods.

Non-stick coatings for frequent use

Non-stick coatings for intensive use

All coatings applied to the Ballarini collections are PFOA-free and ideal for those with allergies to heavy metals and nickel.

Non-stick coatings for professional use

Ceramic coatings

Underlining the extreme reliability of the materials used, a Ballarini collection was included in a major food culture project dedicated to infants and aimed at promoting healthy diets and eco-sustainability. **The project promotes the use of cooking instruments with non-stick coatings that allow you to cook with the partial or complete absence of oils and fats** and seeks to provide the basic rules to follow in order to cook healthily and correctly. A project developed together with ANDID (Italian Dietician's Association), the only association that dialogues with the Italian Ministry of Health and which is authorised to represent Italian dieticians at European level (EFAD). The safety of the raw materials used for these non-stick coatings is further confirmed by their use in the medical sector: from the production of prostheses and coronary bypass instruments to surgical instruments.

Prof. Franco Battaglia, lecturer in Environmental Chemistry at the University of Modena, together with Professor Gianni Fochi, lecturer in Chemistry at the Scuola Normale Superiore of Pisa, recently drafted a document born from an in-depth study into non-stick materials that certifies the complete suitability of non-stick coatings in terms of food safety and environmental friendliness.
